ICT 461 LAB 2 SCREENSHOTS AND REASONING

The HTTP Inspector endpoint successfully received a GET request and returned a 200 OK response. Three observed headers were Content-Type, Host, and Accept. Content-Type specifies that the response is JSON encoded using UTF-8. Host identifies the server and port receiving the

request, in this case localhost on port 3000. Accept indicates the response formats the client can accept, with */* meaning any media type is acceptable.

The screenshot shows the Chrome DevTools Network tab with a list of requests. The selected request is a POST to localhost:3000/inspect. The right-hand pane displays the response headers and request headers.

Status	Method	Domain	File	Initiator	Type	Transferred	Size
